

SHOC2 and KRAS

Corpus co-mention network with DepMap CRISPR co-dependency

DepMap r — $r \geq +0.15$ — $r \leq -0.15$ — $|r| < 0.15$ --- no DepMap pair stronger $|r|$ = deeper colour

Papers 1 3 10 30 the two proteins of interest

Gene-level view; spelling variants merged. Edge width counts distinct papers. Drawn: edges between a protein of interest and its strongest partners (84 partners in the corpus); edges among partners are omitted. DepMap r (coloured when $|r| \geq 0.15$): Pearson correlation of CRISPR gene effect over 1,208 cell lines. Kd, Ki: tightest value reported for the wild-type protein. This pair was forwarded in 2 of 2 KRAS runs in the wildcard evaluation.
