

MEN1 (menin) and KMT2A

Corpus co-mention network with DepMap CRISPR co-dependency

DepMap r — positive — negative --- no DepMap pair fainter = weaker |r|

Papers 1 3 10 30 the two proteins of interest

Gene-level view; spelling variants merged. Edge width counts distinct papers. Drawn: edges between a protein of interest and its strongest partners (21 partners in the corpus); edges among partners are omitted. DepMap r: Pearson correlation of CRISPR gene effect over 1,208 cell lines. Kd, Ki: tightest value reported for the wild-type protein. This pair was forwarded in 1 of 2 epigenetics runs in the wildcard evaluation.
